LOW LEAD

FLUSH VALVE PRIMER

www.pppinc.net

PART NO.: FVP-1VB
 (w/vacuum breaker)

The Flush Valve Primer replaces the standard flush valve connection providing a fresh water prime to replenish the floor drain trap seal. Each time the flush valve operates, approximately 3 ozs. of water flows through the priming tube to the floor drain trap. The flush valve primer is designed to prime one floor drain trap at a distance not to exceed twenty (20) feet from point of installation. The flush valve primer should always be installed with a vacuum breaker. Manufacturer recommends that the make-up water line to the P-trap must have a continuous slope. (Consult Local Code Requirements).

Meets Low Lead Requirements of AB-1953.
